	/Aristotelis M Psitos/ Primary Examiner, Art U	nit 2627	

continuation of note 7 above: Amendments are not entered in part. The newly introduced limitations focusing upon the signal processing circuit as defined in the ultimate paragraph of claim 36, 41 45, 49 introduce limitations not previously presented. Furthermore, the newly amended dependent claims 39,43,47,51,53,54,55,7,58,58,61,62,63,65,66 & 67 also add new limitations not previously presented. These limitations after the scope of the claims previously presented and inherently require both a new search and more than a cursory review of the art and the position(s) presented in the previous OA. Under present USPTO practice such are not performed at this stage. The examinenr strongly recommends the filing of a RCE with such amendments to further a) define the invention, b) ensure proper scope of the claimed invention.

continuation of note 11 above. The rejection(s) under 35 USC 112 parag, one would be overcomed by the appropriate amendments as presented, but not entered. With respect to claim 36 - (amendment to wit ---- and extending in different directions from one another ---) although correcting for the 112 problem, renders this claim and claim 41 as patentable indistinguishable - i.e., duplicative claimed subject matter with no patentable distinction therebetween. Further consideration of such would be required as well as further argument(s) thereto. Again, such is not berformed at this state of the prosecution.

With respect to the presented arguments against the rejection(s), those arguments drawn to limitations not entered are not rebutted - such limitations are not required by the claims. Although such limitations do define over the art.

With respect to the "teaching" away of the combined references, the examienr is not convinced. Again, the "overlapping" of the data marks is considered taught by the secondary reference. Such overlapping permits an encrease in data density by permitting more than 6 basic data, i.e, data No. 1,-4, 15 and 16. The additional data - Nos. 5-14 - are the result of the "overlapping" data. Hence the density is increased. That additional elements are required for this system is not detrimental to the overlal combination for the reason(s) state.

Continuation of note 13. The examiner maintains the drawing objection(s) - note the examiner's response as found starting on page 2 and continuing to page 3 of the previous OA. Again, such diverse claimed limitations are NOT FOUND in the newly submitted/amended drawings. The examiner again recommends a legend in these figures for correcting such deficiencies.
